

Infrared heaters are very stylish, but also convert all their energy into heat which makes them economical too.

as possible."

Matt, who graduated from University with a degree in Fine Art, is going to be overseeing the marketing side of the business.

"It has been a pleasure working with the three guys, bouncing ideas off each other, usually over food. It has been especially interesting to

see how we can make a difference to our customers' energy bills and consumption of electricity.

Tim, a married dad-of-two, has a background in painting and decorating and says he 'can turn his hand to anything'. He's the practical one of the team, and is excited to be helping to launch Jigsaw as a professional company – although he's hoping he'll have time for a few rounds of golf with his father.

The final part of the 'Jigsaw' is Tim's best friend Ben, a 33-year-old technology enthusiast. They met 17 years ago at college, and he has since become close to the Billington family. He says: "When I left college I started working as an apprentice telecom system engineer. Since then, I have always had an interest in practical technology that helps people and improves their lives. This is

why I enjoy talking about and promoting the infrared heaters and Jigsaw's services."

The guys have a full range of their heaters on display in their Avery Road showroom, which opened its doors on September 23. There's stunning Venetian glass panels, mirror effect and a selection of colours to choose from. They're bespoke too, so can come in any size or shape.

The family business' latest addition to the range is a hot-top heater which is a master class in design and suitable for your conservatory, outside seating area or even the garage.

Glenn added: "First impressions count. It's something different, good looking and cost effective, but most importantly, something to be proud of in your home. We say, wait till your neighbours see them..."

The stylish infrared heaters ease allergens in the home or workplace.

The heaters can be made to any size or shape – and there's also a range of colours.
