WHO ARE JIGSAW?

Jigsaw is a family owned business. We are a team of professionals who care about providing an excellent product with a first class finish.

Our goal is to help you modernise your heating system, save you money on your energy bills and add premium products to your home. As part of this we offer the full service from the first fix to plastering, decorating and installation. We tailor each quotation for bespoke installations and decoration to leave your home fully refurbished.

At Jigsaw Solutions, we believe that the future of heating your home efficiently will be infrared. Our products are highly efficient, fully controllable and market leading in their design. We are sure that there will be a Jigsaw product to suit your environment.

The demand of your heating could also be met by combining solar power or other renewable energy sources.

One of our main goals is to reduce the amount of pollution and wasted energy produced by our homes. We are working towards zero CO2, zero waste, high efficiency heating. As part of our commitment to this we use products that are the most efficient on the market, have long working lives and ones that can also be recycled.

*Jigsaw provide the solution piece
by piece*

WHAT IS INFRARED?

Infrared is radiant heat, therefore it feels like stepping out of the shade and into the sun.

What is infrared heating?

Infrared is a modern, innovative way to heat your property. It looks great, takes up very little space, can be wall or ceiling mounted and comes in a wide range of shapes and sizes to suit your room.

Rather than heating the air - like traditional gas, oil and electric systems - infrared heats the very fabric of your building. The process is 100% energy efficient, delivering significant energy and cost saving benefits.

- Up to 25% reduction on gas central heating systems
- Up to 50% reduction on oil central heating systems
- Up to 60% reduction on electrical storage heating.

100% Control

Like conventional heating systems, far infrared heating products can be controlled through a range of programmable thermostats, receivers and sensors. Jigsaw offer a large range of thermostats to control the heaters. Some can be controlled by touchscreen and or phones, tablets and or computers.

Energy Savings

Infrared heats the space and all the objects within it which is 30% more efficient than standard plumbing and up to 60% more than storage heaters.

Convection heaters (Radiators) heat the air, which is inefficient and causes pockets of cold air and drafts. Meaning that all the warm air can be lost.

BENEFITS OF INFRARED

1/3 more energy is required to heat a room using convection heating.

Infrared heats the objects directly when it touches them. That object will then either absorb heat or reflect it to another object within the space. Whereas, convection heat is lost through the materials of the building.

Infrared heat works in exactly the same way as our sun does, whilst this sounds very Science Fiction it is perfectly safe and in fact it is often used to keep premature babies warm in hospital.

Benefits of Infrared

As well as being an efficient way to heat your home, our heaters also have added health benefits.

They help ease allergens, mould and condensation in the space. Infrared does not circulate air. Therefore, it does not circulate dust and pollen.

This helps sufferers of Hay Fever and Asthma and other respiratory issues.

What does it feel like?

Far Infrared is radiant heat, therefore it feels like stepping out of the shade and into the sun. Whilst warming you, IR also boosts your immune system and improves blood flow and circulation. It is also one of the safest, most efficient ways to rid your body of numerous toxins.

Infrared is a healthy vital heat - effectively recreating the sun's comforting warmth. Our bodies naturally absorb and emit the same type of heat. Infrared heat warms the human body more comfortably than heated air currents.

WHAT SIZE HEATER DO I NEED?

Room Heating Measurement

Infrared heaters heat the fabric of the building, materials and people around, not air. This means that the buildings and spaces can retain heat much longer. Initially, this can mean that the heaters will be required to be on for 2-3 days at the start of the colder seasons. The building needs to get to a steady temperature in each room. Once this has been reached, the temperature will just need "topping up." At Jigsaw, we use a simple equation to help work out the heating requirements of each room:

$$\text{Wattage} = \text{Length} \times \text{Width} \times \text{Height} \times 30$$

Length x Width x Height

Then choose the heater to fit the space

Example Calculation

If we look at a space for a living room measuring 4m by 5m with an height of 2.5m the calculation looks like this (30 is the average watts per meter required to heat the space):

$$\text{Wattage} = 4 \times 5 \times 2.5 \times 30$$

$$\text{Room Requires} = \mathbf{1500 \text{ Watts}}$$

Measurements of the Building

It is important to know the construction of the building and its insulation to best gauge the wattage required. An extra 15% should be added for old or poorly insulated apartments or houses. 10% should be added to detached houses, 25% to individual poorly insulated houses.

With our extensive range of stylish heaters there is plenty to choose from. Our calculations will provide some inspiration, but please talk to us today as any combination of heaters can be used to provide the right level of comfort and efficiency. Please note that the heating mats require a slightly different calculation. See their page for further information.

THE ENVIRONMENT

The Future is Green!

At Jigsaw we are planning for the future and we believe that it will be a green one. Due to this, we have high requirements for our infrared heaters.

We have ensured that our heaters are optimised to work with photovoltaic (Solar panels) and other renewable energy systems.

Your heating bill could be reduced with the addition of solar power!

Where does the cost and energy saving come from?

1/3 more energy required to heat a room using convection heat.

Infrared heaters can provide the same comfort levels at lower temperatures than **convection heat**.

Convection heaters take 6% more energy to raise the **temperature by each 1C**.

Convection heat is subject to higher heat loss from piping and draughts than **Infrared heating** is.

Convection heat is a far less efficient source of heat transfer than **Infrared heating** is.

Do Infrared Heating Panels Save Money?

In most cases infrared heating can save you money. However, it is important to be realistic and to understand that they will not save money in every situation.

First of all we need to consider how infrared heat works – infrared heating has been scientifically proven to be around 30% more efficient than convection based heating and up to 60% more efficient than underfloor heating. Less energy equals less CO2.

When comparing convection and infrared heaters, IR delivers heat at the point of energy consumption, there are no distributed heat losses and there is not the same loss of efficiency. In addition no annual maintenance or servicing is required to keep the system operating at maximum efficiency.

Due to the design and application of innovative technologies our heaters feature both high technical and aesthetic resistance properties, thus ensuring a long product life, which is also 100% recyclable.

JIGSAW Premium Glass

“An elegant focal piece to any environment. Plus, 50% saving on my electricity bills.

Pete, West Midlands

Our premium range of Premium Glass heaters come in a large variety of shapes, wattages and colours.

High quality materials have been used to design and make our top of the range Infrared Heaters. Extremely well crafted, these panels are beautiful and will add an elegant focal piece to any environment.

Jigsaw's infrared heaters can be tailored to suit your style and decoration. Whether you would prefer something subtle or if you would like something bespoke that stands out.

We can help tailor your infrared heater to your space. Each of the range is beautifully designed, efficient and easy to clean. They are made from the finest quality Venetian glass.

We are confident in the quality of our panels so each one comes with a 5-year manufacturer's warranty.

Portofino Mirror in Situ

Roma in Situ

Colour Choices with Rounded Edges

There are three shapes in the Premium Glass range to choose from. They are Roma, Portofino and Venice. Premium manufacture, attention to detail and Italian design combine in a truly beautiful heater, extending only 2cm from the wall, which will envelope you in a gentle, relaxing and comfortable warmth.

Venice in Situ

Our heaters are not mass produced as some other companies. Our manufactured process ensures premium quality to enhance and add to the interior decoration of your home or space. Each heater requires a thermostat or switch allowing you to set the temperature in every room or zone.

Our heaters are beautifully crafted to make them works of art.

Feel the Future of Heating. Feel the Warmth of Infrared.

JIGSAW Premium Mirror

*“Wow, that’s a heater
and a mirror!”*

Our bathroom mirror range is one of our best sellers. A mirror heater is a fantastic way of combining two separate items and freeing up wall space. One major benefit of this heater is that it is also IP rated for bathroom use. It will also remain mist free, comes in several shapes and sizes and will suit any bathroom or wet room.

At Jigsaw, we believe that there is nothing worse than a cold bathroom! With sensor controlled panels for perfectly distributed warmth, your whole bathroom will be heated and cold Monday mornings will be a thing of the past.

With a slimline finish, the heater will extend only 2cm from the wall enhancing the space and making the bathroom a place you will want to luxuriate in. The IP35 rating means that you can install the heater anywhere in the bathroom provided that it is 30cm away from a direct water source.

Our premium range of mirror heaters come in a variety of shapes and wattages.

Portofino Mirror in Situ

Venice Mirror in Situ

*Making the bathroom
a place you will want to
luxuriate in.*

The Roma glass range is manufactured with or without gently rounded corners and beautiful minimalistic lines and edges. This range of infrared heaters will provide you with an understated elegance and a comfortable heat.

Anyone who has visited Venice will state that it is clearly one of the wonders of the world. Venice is a city of aesthetic beauty. The Venice range of glass infrared radiant panel heaters reflect the city itself. The fluid lines of the heater recalling travel by gondola on the city’s magnificent waterways.

Named after the stunning Italian coastal town, the Portofino heater references the beautiful architecture and coastline of Italy. The design is both elegant and sophisticated.

Our heaters heaters can be customised for colour and images. Please contact us to ask for information or to place an order.

Feel the Future of Heating. Feel the Warmth of Infrared.

JIGSAW Naples & Pisa Glass

The perfect combination for luxuriating in the bathroom

The exceptional aesthetics and design of our bathroom heating mirrors provide an economical way to heat space. The perfect combination for luxuriating in the bathroom.

In addition to stunning style, this bathroom mirror infrared heater will also significantly reduce heating costs, condensation and black spot mould in the bathroom and the necessity for constant mirror cleaning.

The difference between our heater mirror and other bathroom mirrors is that our mirror heats not only the mirror so that it is mist free at all times, but also heats the whole bathroom. No other form of heating is required so no wasted space with radiators taking up wall space.

Isolation class 2 and IP45 construction means water-resistant and perfect for wet rooms and bathrooms.

JIGSAW Eco Mirror Heater

High quality combined with high efficiency to produce a mist free mirror

Our range of Eco Frameless Mirror infrared heating panels are suitable for home, office spaces, care homes, stores and meeting rooms. High quality Commercial Infrared Heaters are the ideal heating solution for a variety of projects.

Our Eco Frameless Mirror infrared panel heater range combines high efficiency with our connection system and patented reflector technology. This means that 100% of produced infrared rays go to the front of the panel. This ensures that only a very small percentage of convection heat, just 7%, is produced. This means that you are getting the maximum infrared heating benefits.

Austrian manufactured, CE-compliant and both TUV GS and RoHS certified. These heaters are IP44 rated making them suitable for zone 2 in bathrooms and wet-rooms.

2 year manufacturer's warranty included.

Feel the Future of Heating. Feel the Warmth of Infrared.

JIGSAW Infrared Heating Mats

Our heat mats are unobtrusive. Hide them in your walls or underfloor

Our heating mats are an entirely new way of heating. It is not just economical, secure, flexible and comfortable – it is also unobtrusive. Constructed of ultra-thin, unobtrusive graphite heating foils it can be installed easily; virtually vanishing under the floor, behind the wallpaper or beneath the ceiling. Conventional heating, taking up lots of space, is a thing of the past, old-technology.

- It is the flexible, the Future of Heating
- The Low Cost, High Energy heating solution
- Providing Low Voltage Heating from 12 volt to 48 volt, dependent on application, DC or AC
- With a Healthy Heat – Far Infrared Rays (FIR)
- Providing incredibly rapid warm-up times
- Simple insulation
- Renewable energy solution – using heat from Solar Panels
- Zone each room – for maximum heating cost efficiency
- Manufactured in the UK

Rolled Heat Mat

Heat Mat Rolls

Where to use

Extremely efficient and very healthy for your body

Our mats use around 70% less energy than other wire mats and 55% less energy than water based systems. 95% of the mat produces heat compared to 2-4% of wire mats.

A number of heating tiles will be required to heat a room. The mats are then connected to either the 300w or the 1200w power supply and a thermostat to control the room temperature.

To work the wattage required:

Length x width (of the space) x by one of the options below

- 30 for a Passive house
- 50 for a modern house (2010 onwards)
- 50 for 1980-2009 (well insulated)
- 80 for an older house (Good insulation - or conservatory)
- 100 for an older house (with little insulation - or conservatory)

Contact us for a quotation for your home or business and for multi buy options.

JIGSAW Thermostats

The ECO range of infrared heaters provide a cost effective way of heating any property.

At Jigsaw, we strive for energy efficient heating. For this reason, we use a range of controllable thermostats. Each room or zone can be controlled individually via the app for iOS and Android. This saves energy and therefore money.

The Heatmiser neoStat's have been designed to be slim & stylish, with three stunning colours available. neoStat's are just a little bigger than a standard light switch, so you will notice what it does rather than where it is.

neoStat's are available in a number of power options and can be mixed on the same system. What's more, the entire system can be controlled from anywhere when paired to the neoHub. You are in full control of your heating no matter where you are.

JIGSAW Outdoor / Indoor / Commercial

Application of our Outdoor/ Indoor Heaters.

We work hard with our suppliers to ensure we are providing our customers with the best infrared heaters on the market. Each heater offered is designed with unique features to enable our products work for every situation. Fully IP rated, weatherproof and ultra low glare heaters are specifically created for the domestic and commercial markets. Our large scale commercial heaters can heat the space of an indoor tennis court.

The heaters we provide are built to extremely high standards from the best materials. Our bulbs have a life expectancy of approximately 7000 hours. The Gold Reflector on the Monaco heater is chosen due to its properties of being able to withstand temperatures of 350 degrees Celsius and being able to be rolled with such precision to fully reflect any infrared heat from the front of the heater.

Heat any outside spaces. Our range of heaters will provide you with a comfortable, pleasant and warm environment all year round. Not just in the summer months.

COST EFFICIENCY

Running Costs of Infrared

When comparing infrared to gas, the savings are over 30%. The main reason for this saving is due to the effective way that infrared heats a person or object. The heat from one of our heaters is also immediate. You therefore save more money as you do not need our heaters on as long.

Also, our heaters are virtually maintenance free. There are no moving parts, no gas bottles to replace or air filters with most gas heaters.

There is also no need to change bottles of gas when one runs out. Simply switch on the heater with the touch of a button or set it to the desired wattage with your handy remote control.

Domestic Energy comparisons

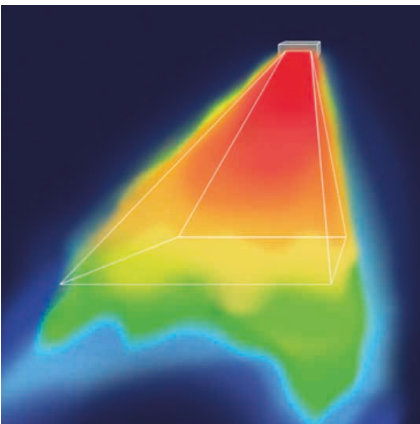

Washing Machine (2kW)	28p per hour
Fridge Freezer (1.4kW)	20p per hour
Tumble Dryer (5kW)	70p per hour
Patio Gas Heater (12kW)	£1.68
Jigsaw Monaco Heater (1.5kW)	21p per hour

Based on the price of electricity being 14p per hour

Heater Comparison

It is clear to see that there is only one clear winner for heat distribution on the market when comparing the range of outdoor heaters currently available. The top diagram shows the coverage of our heaters. 96% of energy consumed is directed as heat. Almost no heat is lost to the air. The Quartz heater loses 40% of its consumed energy and does not project its heat very well. It will therefore not warm the people and objects below efficiently. The Gas heater loses 60% of its effective heat. Most heat is dissipated not very far from the heater in the air.

Our outdoor heaters are up to 96% efficient. Almost no heat is lost to the air. We provide premium products for any environment.
